

Traffic Vision

Smart technology for safer intersections

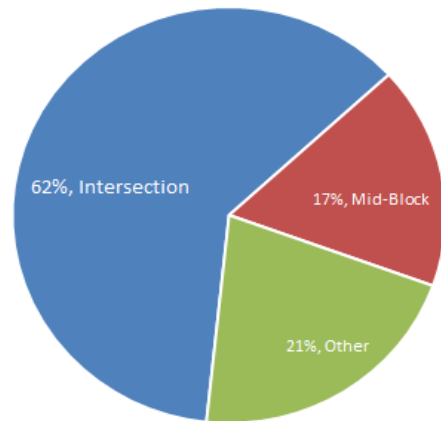

The Problem

- Senior **pedestrians** are vulnerable at **intersections**

of Senior Residents (>60 yrs)

0 - 400
400 - 800
800 - 1200
1200 - 1600
1600 - 2000

OpenStreet Map

They need more time!

Pedestrian Signal Design Speed: ~ 1.0 m/s

Mean walking speed for senior:
0.9 m/s in men and 0.8 m/s in women

Faster gait speed is associated with an
increase in risk ratio for outdoor falls

What we propose...

What we propose...

Extend pedestrian walking time when pedestrians with walking impairment are detected on crosswalk in TensorFlow algorithm.

Benefits

- Discreet and unintrusive
- No learning curve for users
- No registration or card required
- Accessible to anyone needing extra time
- Technology exists and has space for future improvements

Thank you!
